Register

It is the memory of CPU. It is a very important memory in CPU.

→ It is use to quickly accept store and transfer data and instruction that are being used immediately by the CPU.

There are various type of registers.

- 1) Accumulator register (AC)
- 2) Data register (DR)
- 3) Address register (AR)
- 4) Program Counter register (PC)
- 5) Counter register (CR)
- 6) Memory buffer register (MBR)
- 7) Index register (IR)

There are three operators performed by register.

1) Fetch 2) Decode 3) Execute
